

Function 08 — Asset Center

Purpose

Design the complete Asset Center experience for HQ.

Asset Center is the central repository for all digital assets created, uploaded, or managed within an organization. It serves as the organization's secure knowledge and content library, ensuring every important file is organized, searchable, version-controlled, and easily reusable across missions.

Asset Center should feel like a premium digital workspace, not a traditional file explorer.

Product Context

Everything produced in HQ becomes an organizational asset.

Examples include:

- AI-generated reports
- Business plans
- Marketing campaigns
- Brand guidelines
- Logos
- Presentations
- Images
- Videos
- Documents
- PDFs
- Spreadsheets
- Contracts
- Policies
- Research reports
- Financial models
- Software documentation
- Source code exports
- Meeting summaries

Assets can be uploaded by users or generated by AI executives.

Product Philosophy

Users should never wonder:

- "Where did that file go?"
- "Which version is the latest?"
- "Who created this?"
- "Which mission produced this?"
- "Can I reuse this?"

HQ should answer these automatically.

Asset Center Objectives

The Asset Center should allow users to:

- Upload files.
 - Generate new assets.
 - Organize assets.
 - Search instantly.
 - Preview assets.
 - Share assets.
 - Download assets.
 - Track versions.
 - Restore previous versions.
 - Archive assets.
 - Connect assets to missions and conversations.
-

Asset Categories

Support categories such as:

Documents

- Reports
- Business plans
- SOPs
- Policies
- Contracts
- Manuals

Presentations

- Pitch decks
- Executive reports
- Slides

Images

- Logos
- Brand graphics
- Marketing visuals
- AI-generated artwork

Videos

- Promotional videos
- Training videos
- Demonstrations

Audio

- Voice recordings
- Podcasts
- Meeting summaries

Data

- CSV
- Excel
- JSON
- Analytics exports

Design Files

- UI mockups
- Wireframes
- Design systems

Code

- Source code
 - API specifications
 - SDK exports
-

Asset Dashboard

Display:

- Recently created assets.
 - Recently viewed assets.
 - Favorites.
 - Shared assets.
 - AI-generated assets.
 - Uploaded assets.
 - Archived assets.
 - Storage usage.
-

Asset Workspace

Each asset should include:

- Title.
 - Description.
 - Type.
 - Preview.
 - File size.
 - Creator.
 - Creation date.
 - Last modified.
 - Version.
 - Related mission.
 - Related conversation.
 - Related executives.
 - Organization.
 - Tags.
-

Asset Preview

Support built-in previews where possible for:

- PDF
- Word documents
- Presentations
- Images

- Videos
- Audio
- Markdown
- Code snippets

Allow users to inspect content without downloading.

AI Asset Intelligence

HQ should automatically:

- Generate titles.
 - Suggest tags.
 - Categorize files.
 - Detect duplicates.
 - Extract text from documents.
 - Summarize long documents.
 - Recommend related assets.
 - Suggest reuse in future missions.
-

Organization

Support:

- Folders.
 - Smart collections.
 - Tags.
 - Favorites.
 - Starred assets.
 - Recently accessed.
 - Custom views.
-

Search

Support:

- File name search.
- Full-text search.

- Semantic search.
 - Tag search.
 - Mission search.
 - Executive search.
 - Date filters.
 - File type filters.
 - Creator filters.
-

Version Control

Every asset should support:

- Version history.
- Version comparison.
- Restore previous versions.
- Change summaries.
- Approval status.
- Audit history.

No important work should ever be permanently lost.

Collaboration

Allow users to:

- Share internally.
 - Generate secure external links (where permitted).
 - Add comments.
 - Request reviews.
 - Mention teammates.
 - Assign assets to missions.
-

Upload Experience

Support:

- Drag and drop.
- Multi-file upload.

- Folder upload (where supported).
 - Upload progress.
 - Pause/resume uploads.
 - Automatic retry on network interruption.
-

Security

Implement:

- Organization isolation.
 - Role-based permissions.
 - Encryption at rest and in transit.
 - Malware scanning.
 - File integrity verification.
 - Secure download links.
 - Retention policies.
 - Legal hold support.
-

Storage Management

Display:

- Total storage.
- Storage used.
- Storage by category.
- Largest assets.
- Duplicate assets.
- Expiring assets.

Allow administrators to manage quotas and retention rules.

Premium Experience

Design:

- Beautiful card and list views.
- Grid and table layouts.
- Smooth preview transitions.

- Elegant upload animations.
 - Skeleton loading states.
 - Responsive behavior.
 - Light and dark themes.
-

Performance

Plan for:

- Large libraries.
 - Background uploads.
 - Progressive previews.
 - CDN delivery.
 - Thumbnail generation.
 - Lazy loading.
 - Fast search indexing.
-

Analytics

Track:

- Assets created.
 - Assets uploaded.
 - Downloads.
 - Shares.
 - Reuse across missions.
 - Storage growth.
 - Most valuable assets.
 - AI-generated vs user-uploaded assets.
-

Future Evolution

Prepare for:

- AI asset recommendations.
- Automatic document translation.
- OCR for scanned files.
- Video transcription.

- Digital signatures.
 - Enterprise DMS integrations.
 - Offline synchronization.
 - Cross-organization asset sharing (with explicit permissions).
 - AI-generated asset collections.
-

Deliverables

The blueprint should define:

- User journeys.
 - Information architecture.
 - UX flows.
 - UI layouts.
 - Component hierarchy.
 - Asset lifecycle.
 - AI intelligence features.
 - Backend services.
 - APIs.
 - Database models.
 - Storage architecture.
 - Security.
 - Performance.
 - Testing.
 - Edge cases.
 - Responsive behavior.
 - Acceptance criteria.
-

Strategic recommendation

I think the Asset Center should become the **single source of truth** for everything an organization creates.

A mission shouldn't just end with a downloadable file. Its outputs should automatically become indexed organizational knowledge. Months later, a user could ask:

"Show me every marketing campaign we created for FuelOS in the last six months."

or

"Find the latest investor pitch deck."

HQ should immediately retrieve the relevant assets, related conversations, missions, and executive decisions. That transforms the Asset Center from a storage feature into an organizational memory system, making it one of the most valuable capabilities in the entire platform.
