

Function 10 — Settings & Headquarters Administration

Purpose

Design the complete Settings experience for HQ.

The Settings workspace allows organizations to configure every aspect of their Headquarters, including organization information, branding, AI behavior, security, team management, integrations, billing, preferences, and operational policies.

Rather than a traditional settings page, it should function as the organization's administrative control center.

Product Context

Every organization using HQ has unique requirements.

Settings should allow administrators to customize HQ without technical knowledge while maintaining security, consistency, and scalability.

Changes made here affect how the Executive Team operates across the organization.

Product Philosophy

Users should always know:

- What can be configured.
- Why it matters.
- Who can change it.
- What impact the change will have.

Whenever possible, HQ should explain settings in plain business language instead of technical terminology.

Settings Objectives

The Settings workspace should allow organizations to:

- Configure Headquarters.
 - Manage organization information.
 - Customize branding.
 - Manage users and permissions.
 - Configure AI behavior.
 - Control security.
 - Manage integrations.
 - Configure notifications.
 - Monitor subscriptions.
 - Define organization policies.
-

Settings Navigation

Organize settings into clear sections:

- Headquarters
 - Organization
 - Team & Permissions
 - AI Executives
 - Branding
 - Security
 - Notifications
 - Integrations
 - Billing & Subscription
 - Storage
 - Data & Privacy
 - Automation
 - API & Developers
 - Preferences
 - Audit Logs
 - Support
-

Headquarters

Allow administrators to configure:

- Headquarters name.
 - Headquarters logo.
 - Organization description.
 - Industry.
 - Time zone.
 - Language.
 - Business hours.
 - Default currency.
 - Regional settings.
-

Organization

Manage:

- Organization profile.
 - Legal name.
 - Registration information.
 - Business address.
 - Contact information.
 - Tax information (where applicable).
 - Business units.
 - Departments.
-

Team & Permissions

Allow administrators to:

- Invite users.
- Remove users.
- Assign roles.
- Create custom roles.
- Configure department access.
- Review user activity.
- Disable accounts.
- Transfer ownership.

Support role-based access control with fine-grained permissions.

AI Executives

Configure:

- Available executives.
- Executive permissions.
- Default participants.
- Executive availability.
- AI creativity levels.
- Communication style.
- Approval requirements.
- Default language.
- Preferred AI providers (where applicable).

Allow organizations to enable or disable executives based on subscription plans.

Branding

Customize:

- Organization logo.
 - Brand colors.
 - Typography (where supported).
 - Email branding.
 - Report templates.
 - Presentation templates.
 - PDF exports.
 - White-label options for eligible plans.
-

Security

Provide controls for:

- Multi-factor authentication.
- Passkeys.
- Session management.
- Active devices.
- Login history.
- Passwordless authentication.
- Organization-wide security policies.

- Trusted domains.
 - API key management.
 - Data encryption status.
-

Notifications

Configure:

- Email notifications.
 - Mobile push notifications.
 - Browser notifications.
 - Executive briefing schedules.
 - Quiet hours.
 - Notification categories.
 - Delivery preferences.
-

Integrations

Manage connections with external services, including:

- Cloud storage.
- Communication platforms.
- Productivity suites.
- Source code repositories.
- CRM systems.
- Accounting software.
- Calendar providers.
- Webhooks.
- Public APIs.

Each integration should show:

- Connection status.
 - Last synchronization.
 - Permissions granted.
 - Health status.
 - Usage statistics.
-

Billing & Subscription

Display:

- Current plan.
 - Subscription status.
 - Payment methods.
 - Billing history.
 - Invoices.
 - AI credit usage.
 - Storage usage.
 - Renewal dates.
 - Upgrade options.
-

Storage

Allow organizations to:

- Monitor storage consumption.
 - Manage retention policies.
 - Archive assets.
 - Restore archived data.
 - Review storage growth.
 - Identify duplicate files.
-

Data & Privacy

Support:

- Data export.
 - Data deletion requests.
 - Privacy settings.
 - Data residency information.
 - Retention periods.
 - Consent management.
 - Compliance information.
-

Automation

Configure:

- Scheduled executive reports.
 - Automated mission creation.
 - Recurring workflows.
 - Business reminders.
 - Approval workflows.
 - AI-triggered recommendations.
-

API & Developers

For technical organizations, provide:

- API keys.
 - Webhook management.
 - SDK credentials.
 - OAuth applications.
 - Rate limits.
 - API usage.
 - Developer documentation links.
 - Sandbox environments.
-

Preferences

Each user can configure personal preferences, including:

- Theme (light, dark, system).
 - Language.
 - Date and time formats.
 - Accessibility options.
 - Dashboard layout.
 - Default workspace.
 - Keyboard shortcuts.
-

Audit Logs

Allow administrators to review:

- Login activity.
- Organization changes.
- User management.
- Billing events.
- Security events.
- Executive configuration changes.
- Data exports.
- Administrative actions.

Logs should be searchable, filterable, and exportable.

Support

Provide quick access to:

- Documentation.
 - Tutorials.
 - Contact support.
 - Submit feedback.
 - Feature requests.
 - Release notes.
 - System status.
-

Premium Experience

Design:

- Clear categorized navigation.
 - Progressive disclosure for advanced settings.
 - Contextual help panels.
 - Confirmation dialogs for destructive actions.
 - Smooth transitions.
 - Responsive layouts.
 - Light and dark themes.
-

Security

Ensure:

- Role-based access to settings.
 - Confirmation for sensitive changes.
 - Audit logging for every administrative action.
 - Secure handling of credentials and secrets.
 - Protection against unauthorized configuration changes.
-

Performance

Plan for:

- Fast loading.
 - Lazy loading of advanced sections.
 - Optimistic UI updates where appropriate.
 - Reliable synchronization across devices.
 - Background validation for long-running configuration tasks.
-

Future Evolution

Prepare for:

- Multi-region organizations.
 - Enterprise policy management.
 - Advanced automation builders.
 - Organization templates.
 - Configuration versioning and rollback.
 - AI-assisted configuration recommendations.
 - Marketplace-installed modules adding their own settings panels.
-

Deliverables

The blueprint should define:

- Information architecture.

- User journeys.
- UX flows.
- UI layouts.
- Component hierarchy.
- Configuration lifecycle.
- APIs.
- Database models.
- Permission model.
- Security.
- Performance.
- Testing.
- Edge cases.
- Responsive behavior.
- Acceptance criteria.

Strategic recommendation

I recommend **not** exposing every setting immediately. Instead, organize them into two levels:

- **Essential Settings:** Headquarters, Organization, Team, Billing, Notifications, Branding, Security, and Preferences. These are the options most customers will use regularly.
- **Advanced Settings:** AI Executives, Automation, Integrations, API & Developers, Storage, Data & Privacy, Audit Logs, and Enterprise policies. These are for administrators or power users.

This keeps the interface approachable for new customers while allowing HQ to scale into a sophisticated enterprise platform without overwhelming users.

Executive Personalization

Executive Names

Allow organizations to customize the display names of AI executives.

For each executive:

Default system role (cannot be changed)

Custom display name

Avatar

Color/theme

Short description

Welcome message (optional)

Example:

System Role: Finance Director (fixed)

Display Name: CFO

The AI continues to use the Finance Director's capabilities internally while presenting itself as "CFO" throughout the interface.

Headquarters Name

During onboarding, HQ suggests a default name, such as:

Umar Headquarters

or

FuelOS Headquarters

Users can rename it to:

Falcon HQ

Mission Control

Growth Center

Innovation Hub

Netify Command

The Boardroom

Vision HQ

This name appears across the application.

AI Personality (Optional)

Organizations may also customize:

Communication tone (Professional, Friendly, Executive, Technical, Creative)

Formality level

Response length

Preferred language

Greeting style
