

Document 02 – Feature Roadmap

Product Name: HQ

Version: 1.0

Product Category: AI Headquarters Platform

Product Philosophy

HQ is not a collection of AI tools.

HQ is an intelligent headquarters where AI executives collaborate to complete business missions.

Every feature must reinforce this experience.

Product Roadmap

Phase 1 — MVP (Hackathon)

Goal: Deliver an unforgettable AI Headquarters experience that demonstrates intelligent AI collaboration and is polished enough to attract judges, early users, and potential investors.

Module 1 — Authentication

Features:

Email & Password

Google Sign-In

Forgot Password

Email Verification

Secure Session Management

Module 2 — HQ Onboarding

Instead of normal onboarding:

Users build their headquarters.

Steps:

Welcome to HQ

Create Company

Select Industry

Brand Information

Upload Logo

Define Goals

AI CEO Welcome

Headquarters Ready

Module 3 — Headquarters Dashboard

This is the heart of the application.

Displays:

Executive Board

Active Missions

Recent Activities

AI Notifications

Today's Progress

Credits

Subscription

Quick Actions

Module 4 — Executive Board

Initial Executives:

CEO

Marketing Director

Research Director

Creative Director

Content Director

Design Director

Video Director

Analytics Director

Capabilities:

Discuss missions

Delegate tasks

Review outputs

Recommend improvements

Present final strategy

Module 5 — Mission Control ★

The flagship feature.

Users create missions instead of projects.

Examples:

Launch Product

Create Campaign

Grow Instagram

Produce YouTube Video

Build Brand Strategy

Mission Workflow:

Create Mission

CEO Reviews

Executive Discussion

Task Distribution

Execution

Review

Delivery

Module 6 — AI Workspace

A collaborative workspace where users can:

View executive conversations

Approve suggestions

Edit outputs

Ask questions

Request revisions

Module 7 — Brand Memory

Stores:

Company Name

Mission

Tone of Voice

Target Audience

Products

Brand Colors

Writing Style

Brand Assets

Executives use this context automatically.

Module 8 — Content Generation

Support:

Social Posts

Blogs

Emails

Landing Pages

Ad Copy

Product Descriptions

Video Scripts

Content Calendar

Module 9 — Image Generation

Capabilities:

Marketing Images

Social Graphics

Thumbnails

Product Images

Brand Illustrations

Module 10 — Asset Library

Stores:

Images

Documents

Generated Content

Videos

Logos

Campaign Assets

Module 11 — Subscription & Billing

Plans:

Free

Pro

Business

Features:

Stripe integration

Subscription Management

Usage Tracking

Invoice History

Module 12 — Settings

Sections:

Company

Brand

Executives

Billing

Security

Notifications

AI Preferences

Phase 2 — Growth

After the hackathon:

Social Media Publishing

Schedule Posts

Publish Automatically

Multi-platform Support

AI Video Generation

Full Videos

Voiceovers

Shorts

Reels

Team Collaboration

Invite Members

Roles

Permissions

Shared Missions

Mobile Application

Android

iOS

Push Notifications

Mobile HQ

Analytics Center

Growth Reports

AI Performance

Campaign Success

Audience Insights

Phase 3 — AI Business Operating System

Expand HQ beyond creativity.

Departments:

Sales

Finance

Customer Success

Legal

HR

Product

Operations

Business Intelligence

At this stage, HQ evolves into a complete AI Business Operating System.

AI Executive Collaboration Flow

User

CEO

Executive Board

Mission Planning

Task Assignment

Execution

Quality Review

Final Approval

Delivery

MVP Success Criteria

The MVP is successful if a user can:

Create an account.

Build a Headquarters.

Meet the Executive Board.

Launch a mission.

Watch AI executives collaborate.

Receive high-quality outputs.

Manage assets.

Subscribe to a paid plan.

Features Deliberately Excluded from MVP

To keep the hackathon scope realistic, we will not include:

Voice calls with AI

Full AI video generation

Mobile app

Third-party publishing

CRM integrations

Enterprise administration

Marketplace

Public API

These remain part of the long-term roadmap.

Core MVP Principles

Every feature in the MVP must satisfy these principles:

Mission-driven — Users complete missions, not isolated tasks.

Executive collaboration — AI agents work together visibly.

Premium experience — Every screen should feel polished.

Fast execution — Time-to-result should be measured in minutes.

Business outcomes — The focus is on helping users achieve meaningful goals, not just generating content

Revised

I actually think this is a much better architecture. Instead of thinking in terms of pages, we'll think in terms of layers, like a real enterprise platform. This will also make it much easier for Codex, Antigravity, or any AI coding assistant to implement the system consistently.

Document 02 (Revised)

HQ Feature Roadmap & System Architecture

Architecture Overview

HQ is built on four core layers.

HQ Platform

|

Each layer has a clear responsibility.

Layer 1 — Foundation Layer

This powers the entire platform.

Authentication

Email & Password

Google Login

Password Reset

Email Verification

Session Management

User Management

User Profile

Roles

Permissions

Preferences

Company Management

Company Profile

Industry

Team Size

Goals

Workspace

Personal HQ

Team HQ

Billing

Subscription

Payments

Credits

Usage Tracking

Database

Users

Companies

Missions

Assets

Executive Memory

Logs

Layer 2 — Headquarters Layer

This is what users interact with.

HQ Dashboard

Displays:

Executive Board

Active Missions

Today's Progress

Notifications

Credits

Recent Activities

Executive Board

Contains:

CEO

Marketing Director

Research Director

Creative Director

Design Director

Content Director

Video Director

Analytics Director

Each executive has:

Status

Current Task

Progress

Output

Recommendations

Mission Control

Users never create "projects."

They create missions.

Example:

Mission

CEO Analysis

Executive Discussion

Task Assignment

Execution

Quality Review

Delivery

Asset Center

Stores:

Images

Videos

Documents

Campaigns

Logos

Brand Files

Intelligence Center

Shows:

AI Decisions

Executive Timeline

Mission Analytics

Business Insights

Layer 3 — AI Intelligence Layer

This is the brain of HQ.

CEO Agent

Responsibilities:

Understand user goals

Break missions into tasks

Coordinate executives

Approve final work

Executive Collaboration Engine

Responsible for:

Task delegation

AI communication

Workflow management

Progress monitoring

Brand Memory

Stores:

Brand Voice

Writing Style

Target Audience

Products

Competitors

Goals

AI Content Engine

Creates:

Posts

Blogs

Emails

Landing Pages

Ads

Scripts

AI Image Engine

Creates:

Social Graphics

Thumbnails

Product Images

Marketing Assets

AI Strategy Engine

Responsible for:

Marketing Plans

Campaign Strategies

Growth Recommendations

Audience Research

Layer 4 — Experience Layer

This is where users fall in love with HQ.

Onboarding

Instead of:

"Create Account

Users experience

Welcome to HQ

Create Company

Meet CEO

Executive Introduction

HQ Ready

Live Executive Activity

Users watch executives working in real time.

Examples:

CEO reviewing mission...

Marketing planning strategy...

Research gathering insights...

Creative designing assets...

Analytics reviewing performance...

Mission Timeline

Shows every step from:

Mission Created

CEO Planning

Executive Collaboration

Execution

Review

Completed

Notifications

Examples:

CEO has approved your mission.

Marketing has completed strategy.

Design assets are ready.

Content approved.

Mission completed.

Micro Animations

Examples:

Executive avatars

AI thinking states

Mission progress

Success celebrations

HQ startup animation

MVP Scope

Must Have

Authentication
HQ Dashboard

Business Intelligence

Development Order

This is the order we'll build HQ:

Sprint 1

Foundation Layer

Sprint 2

Headquarters Layer

Sprint 3

AI Intelligence Layer

Sprint 4

Experience Layer

Sprint 5

Testing, Optimization & Demo

One Improvement Before Document 03

I want to add a fifth invisible layer that users never see:

Platform Services Layer

This would include:

AI orchestration

Background job processing

Event bus

File storage

Notifications

Logging

Monitoring

Security

Caching

Rate limiting

Audit logs
