

Document 05 — Business Domain Model & Database Blueprint

Product Name: HQ

Tagline: Your AI Headquarters

Version: 1.0

Purpose

This document defines the core business entities that power HQ.

Instead of thinking about database tables first, we define the business objects and their relationships. These business entities will later be translated into PostgreSQL tables using Prisma ORM.

HQ Domain Overview

Platform

- |
- |— Users
- |
- |— Organizations (Companies)
- |
- |— Headquarters
- |
- |— Departments
- |
- |— AI Executives

Core Business Entities

1. User

Represents every registered person using HQ.

Responsibilities

- Authentication
- Profile
- Preferences
- Subscription
- Headquarters ownership

Relationships

User

Owns one or more Companies

Accesses one or more Headquarters

2. Company

Represents the user's business.

Stores:

- Company Name
- Industry
- Website
- Description
- Team Size
- Business Goals

A company may own multiple brands.

3. Brand

Represents a business identity.

Stores:

- Brand Name
- Logo
- Colors
- Fonts
- Tone of Voice
- Target Audience
- Products
- Services
- Social Links

Every mission uses Brand Memory.

4. Headquarters

The user's AI Headquarters.

Stores:

- HQ Name
- Company
- Departments
- Executive Board
- Active Missions
- Mission History

One Headquarters contains multiple departments.

5. Department

Examples:

- Marketing
- Creative
- Research
- Technology
- Sales
- Finance
- Operations
- Customer Success
- HR
- Legal
- Analytics

Each department contains executives.

6. Executive

Represents one AI Director.

Stores:

- Executive Name
- Role
- Department
- Status
- Memory
- Skills
- Prompt
- Available Tools
- Assigned Tasks
- Current Mission

Examples:

- CEO
- Chief of Staff
- Marketing Director
- Design Director

7. Mission

The most important entity in HQ.

Stores:

- Mission Title
- Description
- Goal
- Priority
- Status
- Deadline
- Assigned Departments
- Executive Owner
- Deliverables

Every mission generates multiple tasks.

8. Task

Created by the Chief of Staff.

Stores:

- Task Title
- Executive

- Mission
- Status
- Dependencies
- Deadline
- Output

Tasks combine to complete missions.

9. Conversation

Stores all communication.

Examples:

- User ↔ CEO
- CEO ↔ Chief of Staff
- Executive ↔ Executive

Every message becomes part of mission history.

10. Asset

Stores generated files.

Examples:

- Images
- Documents
- Videos
- Logos
- PDFs
- Marketing Assets

Assets belong to missions.

11. Knowledge Base

Shared organizational memory.

Contains:

- Brand Knowledge
- Company Knowledge
- Industry Knowledge
- Previous Missions
- AI Learnings

Every executive reads from it.

12. Executive Memory

Private memory for each executive.

Example:

Marketing remembers:

- Previous campaigns
- Audience behavior

Design remembers:

- Visual preferences
- Brand assets

Research remembers:

- Competitors
- Market trends

13. Notification

Stores:

- Mission updates
- Executive alerts
- Billing reminders
- System announcements

14. Subscription

Stores:

- Plan
- Billing Cycle
- Usage
- Credits
- Renewal Date
- Payment Status

15. Payment

Stores:

- Amount
- Currency
- Provider
- Invoice
- Receipt
- Transaction Stat

16. Analytics

Stores:

- Mission Performance
- AI Usage
- Executive Performance
- User Activity
- Business KPIs

Domain Relationships

User

Entity Ownership Rules

- Users own Companies.
- Companies own Brands.
- Companies own Headquarters.
- Headquarters own Departments.
- Departments own Executives.
- Missions belong to Headquarters.
- Tasks belong to Missions.
- Assets belong to Missions.
- Conversations belong to Missions.
- Executive Memory belongs to Executives.

Future Expansion

The model is designed to support:

Multiple Headquarters per organization

Team collaboration

Multi-brand management

AI Marketplace

Custom AI Executives

Enterprise organizations

API integrations

White-label deployments

No redesign should be required as HQ grows.

Design Principles

The domain model follows these principles:

Business-first architecture.

Clear ownership of every entity.

Separation of concerns.

Scalability by design.

Extensibility without schema redesign.

AI-native data organization.

Auditability and traceability.

Enterprise readiness.

Conclusion

This domain model serves as the foundation for the entire HQ platform.

Every database table, API endpoint, backend service, and frontend component will be derived from these business entities, ensuring consistency across the entire system.
