

HQ Master Product Prompt — Onboarding Enhancement & Completion

Objective

You are a world-class team consisting of a Product Manager, UX Researcher, Customer Experience Designer, Product Designer, Frontend Architect, Backend Architect, AI Experience Designer, Security Engineer, QA Lead, and Enterprise SaaS Consultant.

You have been given an existing onboarding and identity flow for HQ.

Your responsibility is **not to redesign it from scratch**.

Instead, perform a comprehensive product review and enhance it until it reaches world-class quality.

Preserve the existing journey and philosophy while identifying every missing detail, edge case, interaction, workflow, and customer experience improvement required for production.

Product Context

HQ is an AI Executive Headquarters.

It helps businesses build an AI Executive Team that learns their organization, collaborates across departments, and helps owners make better decisions.

The onboarding experience should feel like establishing a new headquarters—not registering for software.

The customer should feel welcomed, understood, and excited before entering HQ.

Existing Journey

The current onboarding flow already includes:

- Public Pages
- Get Started Free
- Welcome to HQ
- Let's Build Your Headquarters

- Discover Your Business
- Organization Profile
- Business Goals
- Headquarters Configuration
- Meet Your Executive Team
- Review Your Headquarters
- Activate Your Headquarters
- Google Authentication
- Email + OTP Authentication
- Headquarters Initialization
- Welcome to HQ
- First Guided Mission

Do **not** remove or replace these stages unless there is a compelling usability reason. Build upon them.

Your Mission

Review the entire onboarding experience as if preparing HQ for a global production launch.

Identify every missing requirement, improvement opportunity, usability issue, accessibility concern, technical consideration, security enhancement, and premium experience that should be included.

Areas to Evaluate

Perform a complete review of the onboarding flow, including but not limited to:

Product Experience

- Missing user journeys
- User psychology
- Drop-off risks
- Trust-building opportunities
- First impressions
- Conversion optimization

UX

- Navigation
- Progress indicators

- Back/Next behavior
- Save & Resume Later
- Skip optional steps
- Inline validation
- Confirmation dialogs
- Review screens
- Contextual help
- Tooltips
- Keyboard shortcuts (where appropriate)

UI

- Mobile-first layouts
- Tablet experience
- Desktop experience
- Responsive behavior
- Loading states
- Empty states
- Error states
- Success states
- Micro-interactions
- Motion design
- Premium visual polish

AI Experience

Evaluate how HQ should:

- Welcome the customer
- Learn about the business
- Build trust
- Introduce the Executive Team
- Explain recommendations
- Summarize understanding
- Show confidence levels
- Recommend the first mission

Authentication

Review:

- Google OAuth
- Email OTP
- Session management
- Trusted devices
- Device recognition
- Expired OTP handling

- Rate limiting
- Failed authentication recovery
- Returning users
- Partially completed onboarding

Business Discovery

Determine whether HQ collects enough information while keeping friction low.

Recommend:

- Better questions
- Smarter defaults
- Progressive profiling
- Industry-specific follow-up questions
- Confidence scoring
- Business maturity assessment
- AI readiness assessment

Security

Review:

- Bot protection
- Abuse prevention
- OTP limits
- Audit logs
- MFA readiness
- Session expiry
- Privacy
- Data protection

Engineering

Review:

- Database requirements
- API endpoints
- State management
- Caching
- Autosave
- Event logging
- Analytics
- Performance
- Offline recovery

Accessibility

Ensure compliance with accessibility best practices, including keyboard navigation, screen readers, color contrast, reduced motion, and scalable typography.

Analytics

Recommend events to track, such as:

- Onboarding started
- Step completed
- Step abandoned
- Resume onboarding
- Verification success
- Verification failure
- First mission launched

Edge Cases

Identify and document scenarios including:

- Browser refresh
- Internet disconnection
- Closing the browser
- Duplicate organizations
- Duplicate emails
- Expired sessions
- Returning after several days
- Multi-device onboarding
- Organization ownership conflicts

Future Expansion

Recommend enhancements that are not required for the MVP but should be documented for future releases, such as:

- Enterprise onboarding
 - Team invitations during onboarding
 - Industry templates
 - AI-assisted document import
 - CRM/accounting integrations
 - Passkeys
 - Enterprise SSO
-

Output Requirements

Produce a structured enhancement report containing:

1. Missing features
2. UX improvements
3. UI improvements
4. AI experience improvements
5. Security improvements
6. Engineering improvements
7. Accessibility improvements
8. Analytics recommendations
9. Edge cases
10. Future enhancements
11. Prioritized implementation recommendations (Must Have, Should Have, Nice to Have)

Do not rewrite the existing onboarding flow. Instead, extend it into a complete, production-ready blueprint while preserving HQ's philosophy of simplicity, premium design, and customer-first experience.
