

Function 04 — Executive Boardroom

Purpose

Design the complete Executive Boardroom experience for HQ.

The Executive Boardroom is the heart of the platform. It is where users interact with their AI Executive Team, monitor executive activity, understand ongoing work, launch new initiatives, and receive strategic recommendations.

The experience should feel like walking into the headquarters of a modern, intelligent company rather than opening a traditional software dashboard.

Product Context

HQ is an AI Executive Headquarters.

The Executive Boardroom is the primary workspace where users oversee their AI executives, missions, and organizational intelligence.

It must balance powerful capabilities with clarity, ensuring that first-time users are not overwhelmed while giving experienced users deep operational visibility.

Objectives

Design a premium, intuitive, and scalable Boardroom that:

Immediately communicates the value of HQ.

Makes the AI Executive Team feel alive.

Shows meaningful business information rather than technical metrics.

Encourages action through intelligent recommendations.

Supports organizations from startups to enterprises.

Scales without becoming cluttered.

Design Philosophy

The Boardroom should feel like:

An executive command center.

A premium enterprise workspace.

Calm and focused.

Elegant rather than flashy.

Data-rich but easy to understand.

Alive through subtle motion and real-time updates.

Users should always know:

What is happening.

What needs attention.

What HQ recommends next.

Areas to Design

The specification should include, but is not limited to:

Overall Workspace Layout

Global layout structure.

Navigation hierarchy.

Responsive layouts.

Desktop, tablet, and mobile experiences.

Executive Board

Executive cards.

Executive avatars.

Availability indicators.

Current responsibilities.

Confidence levels.

Activity status.

Department grouping.

Collaboration visualization.

CEO Workspace

Daily executive briefing.

Strategic recommendations.

Mission approvals.

Risks and opportunities.

Executive summary.

Mission Overview

Active missions.

Pending approvals.

Recent completions.

Mission health.

Priority indicators.

Estimated completion times.

Organizational Intelligence

Business health summary.

Goal progress.

KPIs.

AI insights.

Emerging opportunities.

Operational risks.

Activity Timeline

Executive conversations.

Task assignments.

Decision history.

Collaboration events.

Mission milestones.

Notifications

Critical alerts.

Executive requests.

Approvals.

Recommendations.

System updates.

AI Interaction

Ask the CEO.

Start a mission.

Continue an existing mission.

Executive discussions.

Clarification requests.

Premium Experience

Design:

Motion language.

Card interactions.

Hover states.

Loading states.

Empty states.

Error handling.

Theme transitions.

Light and dark modes.

Accessibility

Ensure keyboard navigation, screen reader compatibility, color contrast, scalable typography, and reduced-motion support.

Performance

Specify lazy loading, real-time updates, caching strategies, WebSocket behavior, optimistic UI updates, and graceful degradation.

Analytics

Recommend user interaction metrics, executive utilization metrics, mission engagement metrics, and workspace performance indicators.

Future Evolution

Plan for:

Multi-monitor layouts.

Personalized dashboards.

Voice interaction.

Collaborative boardrooms.

AR/VR executive rooms.

Autonomous executive monitoring.

Deliverables

The final blueprint should define:

Complete user journey.

Screen hierarchy.

Component hierarchy.

UX flows.

UI specifications.

Interaction patterns.

AI behavior.

Backend requirements.

API requirements.

Database considerations.

Security requirements.

Performance targets.

Edge cases.

Responsive behavior.

Acceptance criteria.

One strategic recommendation

I think we should avoid designing the Boardroom as a static dashboard.

Instead, think of it as a living executive office.

For example:

The CEO greets the user by name with a personalized daily briefing.

Executive cards subtly animate when work is in progress.

Collaboration lines light up when executives exchange information.

The Activity Timeline updates in real time as missions progress.

Recommendations evolve based on business goals and recent activity.

The interface stays calm and uncluttered, highlighting only what needs the user's attention.

That approach will make HQ memorable and reinforce its identity as an AI Executive Headquarters rather than just another analytics dashboard.
