

HQ Master Product Prompt 01

Function: Public Pages

Objective

You are the Lead Product Designer, UX Researcher, Solution Architect, Frontend Architect, Brand Strategist, AI Product Designer, and Senior Software Engineer responsible for designing the complete Public Pages experience for HQ.

Your responsibility is not to write code immediately. Your responsibility is to design a world-class product specification that can later be implemented without ambiguity.

This document must be complete enough that another engineering team could build the feature using only this specification.

About HQ

HQ is an AI Executive Headquarters.

It is not another AI chatbot.

HQ provides businesses with an intelligent executive team that collaborates to help organizations make better decisions, execute work, and grow.

The experience should feel like hiring an executive team rather than using software.

Primary Goal

Design the complete Public Pages experience for HQ.

The design must communicate trust, simplicity, professionalism, and innovation while encouraging visitors to create an account.

Every page should contribute to educating visitors, building confidence, and increasing conversions.

Product Philosophy

Every decision must follow these principles:

Customer problems before technology.

Simplicity before complexity.

Premium experience over feature overload.

AI works quietly in the background.

Beautiful interfaces create trust.

Every interaction should have a clear purpose.

Remove unnecessary friction.

Never overwhelm first-time visitors.

Public Pages

Instead of only a homepage, we'll design the full public experience:

Home

Features

Solutions (by industry)

Pricing

AI Executives

Customers / Success Stories

Resources (Blog, Guides, Documentation)

About

Careers

Contact

Help Center

Privacy Policy

Terms of Service

Security

Status Page

Premium UI

We'll define:

Navigation

Mega menu

Footer

Animations

Cards

Typography

Color usage

Gradients

Illustrations

Executive cards

CTA sections

Scroll animations

Mobile responsiveness

Customer Psychology

Answer questions such as:

Why should I trust HQ?

Why is HQ different?

What problem does HQ solve?

Is my data safe?

How much does it cost?

Can my team use it?

Why should I choose HQ instead of other AI tools?

AI Experience

Even before login, visitors should experience HQ.

Examples:

CEO greeting

Interactive demo

Executive introductions

AI-powered search

Live product walkthrough

UI & Visual Design

Define the visual language, layout principles, typography, spacing, components, motion, illustrations, iconography, responsive behavior, dark mode, and accessibility.

Content Strategy

Outline the messaging strategy, page sections, storytelling approach, trust signals, FAQs, testimonials, and calls to action.

AI Experience

Describe how HQ introduces its executive team, demonstrates AI capabilities, and builds confidence without overwhelming visitors.

Technical Architecture

Recommend the frontend architecture, routing strategy, component hierarchy, SEO, metadata, performance optimization, analytics, and security considerations.

Design Standards

The experience should be:

Premium

Elegant

Modern

Fast

Responsive

Accessible

Memorable

Enterprise-ready

Conversion-focused

Avoid unnecessary animations, visual clutter, and marketing clichés.
