

Function 06 — Conversations

Purpose

Design the complete Conversations experience for HQ.

Conversations are the primary communication channel between the Headquarters Owner and the AI Executive Team.

Rather than acting as a traditional chatbot, Conversations should function like executive meetings where users discuss business ideas, ask questions, review work, make decisions, and collaborate with one or more AI executives.

Every conversation should have context, purpose, memory, and actionable outcomes.

Product Context

In HQ, conversations are organizational assets.

They are not disposable chats.

Every conversation belongs to an organization and can contribute to missions, executive memory, business knowledge, and future recommendations.

The AI should always remember the business context without forcing users to repeat themselves.

Product Philosophy

Conversations should feel like sitting in a boardroom with experienced executives.

The user should never have to think about:

- AI models
- Prompt engineering
- Context windows
- Token limits
- Technical settings

Instead, they simply communicate naturally while HQ manages the complexity behind the scenes.

Conversation Types

Support multiple conversation modes, including:

- CEO Conversation
 - Executive-to-Executive Discussion
 - Mission Conversation
 - Business Consultation
 - Brainstorming Session
 - Document Review
 - Strategy Session
 - Decision Meeting
 - Follow-up Discussion
 - Quick Questions
-

Conversation Objectives

Design a workspace that enables users to:

- Start new conversations.
 - Continue previous discussions.
 - Collaborate with one or multiple executives.
 - Reference existing missions.
 - Upload supporting documents.
 - Receive structured recommendations.
 - Convert conversations into missions.
 - Save important decisions.
-

Areas to Design

Conversation Home

Display:

- Recent conversations.

- Pinned conversations.
 - Active conversations.
 - Shared conversations.
 - Archived conversations.
 - Conversation search.
-

New Conversation

Allow users to start conversations naturally.

Examples:

"How can I increase fuel station profitability?"

"Review my marketing strategy."

"Help me prepare for an investor meeting."

HQ should determine:

- Which executives should participate.
 - Whether a mission is needed.
 - Whether existing organizational knowledge can answer immediately.
-

Executive Participation

Support conversations involving:

- CEO only.
- One specialist executive.
- Multiple executives.
- Entire Executive Board.

Show who is participating and why.

Conversation Workspace

Each conversation should contain:

- Title.
- Objective.
- Participants.

- Messages.
 - AI reasoning summary.
 - Attachments.
 - Decisions.
 - Related missions.
 - Related assets.
 - Related knowledge.
-

Executive Discussions

Allow executives to collaborate internally when appropriate.

Users should see concise summaries rather than every internal reasoning step.

Example:

The CEO consulted the Finance Director and Operations Director before providing this recommendation.

Conversation Memory

Allow HQ to remember:

- Business context.
- User preferences.
- Previous decisions.
- Related conversations.
- Mission history.

Users should never need to repeat information unnecessarily.

Suggested Actions

During conversations, HQ can recommend actions such as:

- Create Mission
- Schedule Follow-up
- Save as Knowledge
- Assign to Executive
- Generate Report
- Create Presentation

- Export Summary
-

Search & Retrieval

Support:

- Full-text search.
 - Semantic search.
 - Executive filtering.
 - Mission filtering.
 - Date filtering.
 - Organization filtering.
 - Attachment search.
-

AI Guidance

Throughout conversations, HQ should proactively:

- Ask clarifying questions.
 - Highlight risks.
 - Recommend opportunities.
 - Suggest relevant executives.
 - Reference previous work.
 - Detect missing information.
-

Attachments

Support uploading:

- Documents.
- Images.
- PDFs.
- Presentations.
- Spreadsheets.
- Reports.

Executives should automatically analyze relevant files when appropriate.

Premium Experience

Design:

- Premium message layouts.
 - Executive avatars.
 - Typing indicators.
 - Collaboration indicators.
 - Context panels.
 - Elegant animations.
 - Beautiful loading states.
 - Responsive layouts.
-

Security

Consider:

- Organization isolation.
 - Conversation permissions.
 - Executive access controls.
 - Sensitive information handling.
 - Audit trails.
 - Data retention.
-

Performance

Support:

- Streaming AI responses.
 - Large conversation histories.
 - Fast semantic search.
 - Background indexing.
 - Efficient pagination.
 - Offline resilience where appropriate.
-

Analytics

Track:

- Conversations started.
- Conversations converted into missions.

- Executive participation.
 - User satisfaction.
 - Knowledge reuse.
 - Conversation resolution rates.
-

Future Evolution

Prepare for:

- Voice conversations.
 - Video executive meetings.
 - Real-time team collaboration.
 - Live meeting transcription.
 - Multilingual conversations.
 - Cross-organization collaboration (where permitted).
 - AI-generated meeting minutes and action items.
-

Deliverables

The blueprint should define:

- User journeys.
 - UX flows.
 - UI layouts.
 - Conversation lifecycle.
 - Executive participation rules.
 - Memory integration.
 - APIs.
 - Database models.
 - Security.
 - Performance.
 - Edge cases.
 - Responsive behavior.
 - Acceptance criteria.
-

One idea I'd strongly recommend

Instead of labeling this workspace "**Conversations**," consider branding it as "**Boardroom Discussions**."

Inside, users still have conversations, but the name reinforces HQ's identity as an executive headquarters. When users click it, they feel they're joining a business discussion with their executive team rather than opening a generic AI chat. This small branding decision could help distinguish HQ from other AI products while remaining intuitive.
